

MOUNTING OPTIONS

To allow versatility in mounting, the Icepack units are designed to be supported from the rear or from underneath. The rear mounted units are for mounting to the side of the chassis behind, between or in front of the fuel tanks. Base mounted units can be mounted in a variety of different ways using additional brackets.

We also offer custom finish options, including colour coded or stainless steel Icepack covers.

ICEPACK FEATURES

Icepacks can be operated from within your sleeper at the turn of a key. Temperature and fan controls are included.

The remote control panel can be mounted to the ducted vent post or almost anywhere in your sleeper.

A range of stylish and practical ducted vent posts are available.

DUCTED VENT POSTS

ICEPACK INSTALL KITS

Complete units are available in kit form.

Kit includes: Evaporator, hoses, fittings, wiring and standard mounting brackets. Custom mounting brackets are available to suit most applications.

For professional installation and servicing of Icepacks, we have authorized agents Australia wide. For a contact list of agents, please contact us on 1800 625746 WWW.HAULTECH.COM
